Description

PicoSSR 3™

PicoSSR 3 is the world's smallest MOSFET for AEG. Even though its dimensions are merely 4x6x21 mm, PicoSSR 3 is very powerful. It has great electrical and mechanical parameters and fits replicas with little space for MOSFET.

Additionally, it is fully resistant to water immersion (after heatshrink tube fitting). It can work with the strongest AEG replicas - maximum battery rated voltage is 12.8V.

Key functions

MOSFET

Do you want to achieve higher rate of fire and faster trigger response? Are you planning power upgrade of your rifle? In that case, you need a MOSFET.

It targets the energy from the battery directly to the motor, bypassing the mechanical trigger contacts. As a result, you gain a higher rate of fire of the rifle and faster trigger response, and the contacts are protected against burn out.

PicoSSR 3 is not compatible with micro-switches!

Included in the kit:

- PicoSSR 3
- 2 x single signal wire for trigger contacts, each 60cm long
- 3 x heat shrink tube

Warning!

GATE does not guarantee the compatibility of mosfets and ETUs such as TITAN or ASTER with brushless motors. Connection of a brushless motor can cause immediate damage to the device, motor and battery, that is not covered by the warranty and can lead to a fire.
